

MDSO Forensic Biology Laboratory Manager Miami, Florida

Job Description:

The duties involve directly supervising employees that perform duties that include collection, examination, preservation, documentation, preparation, or analysis of biological related evidence and testimony, or employees that are direct supervisors to those employees with these responsibilities. Also, responsible for coordinating case assignments or assigning a designee, directing physical and chemical analysis of evidence obtained at crime scenes or elsewhere, conducting technical and/or administrative review of analysis of biological evidence and presenting findings for investigation and prosecution.

Qualifications:

Bachelor's degree in Chemistry, Physics, Biology, or related science. Minimum of five years of technical experience in forensic DNA analysis including compliance with the Federal Bureau of Investigation Quality Assurance Standards for Forensic DNA Testing Laboratories (version 2017 or later) is required. Supervisory experience is highly desirable.

Job Posting: 2/9/26-3/2/26
