

Uncover Forensics FORENSIC TRAINING

RECOVERY OF EVIDENCE DURING SEXUAL ASSAULT SCENES

8-hour online, self-paced course

Crime scene processing is a critical stage for investigators, especially when biological evidence is the pivotal aspect that will obtain a conviction. This 8-hour course is entirely dedicated to documenting and processing major sexual assault crime scenes. Topics include searching and processing evidence for the presence of biological fluids, touch DNA, trace evidence, and any other probative evidence that can link a victim with a suspect. The use of forensic light source for the detection of body fluids, evidence packaging, chain-of-custody concerns, and victim injury photos documentation are also discussed.
